

Hi everyone!

To make the online classes smoother and easier for yourself and for the other participants, here are a few tips!

Check out the screenshots on the next page to help you find the important buttons 😊

In advance

- I recommend downloading the Zoom application on your telephone or the software on your computer.
- It is possible to access a meeting via your web browser, but the settings are more limited. This may prevent you from being able to change the viewing options for example.
- If you have the option to connect your computer or phone to a television or larger screen, this is likely to make following the class easier/more comfortable.
- If you can connect your computer via cable to your modem, that will also give you a better connection.

Arrivals

- You can use the chat window to say hi to everyone. 😊
- Turn your video ON to wave and interact.
- If you like, you can turn your microphone ON to say hi -> this will probably be a little bit crazy, but it's fun!

Class time

- I will mute all microphones when I start the class. After this, please keep your microphone OFF to prevent background noise during explanations and songs.
- Please turn your video OFF. This will reduce the amount of bandwidth required for the call and should improve the sound quality & the quality of my video for everyone. #fingerscrossed
- Use the "Speaker View" option to see my screen in full while I'm explaining and dancing.

Feedback

- This is a learning process for all of us, so if you have feedback please get in touch!

Take care and stay safe,

Sarah

Toggle between Speaker View and Gallery View

Microphone & video ON/OFF

Show/hide the chat window

And what it looks like after selecting Speaker View!
